

Sapien is a decentralized social news platform, powered by our utility token, SPN. SPN is a flexible, ERC20-compliant cryptocurrency that will serve as the backbone of our tokenized economy.

Why the Sapien Network?

Current social media sites sell user data, have no effective way to identify fake news, and are unable to reward users who create value.

Sapien will incentivize creators to produce high-quality content by rewarding users with SPN. Users can manage their token portfolio in the Sapien digital wallet, which can store any Ethereum ERC20 standard token. SPN can be used in our decentralized marketplace to buy physical and virtual goods, content, and services enabled by our global reputation system.

A user's contributions within Sapien are evaluated by other users, accumulating a reputation score that reflects their expertise in a domain. The Sapien Network will allow a community to distinguish valuable content, limiting the influence of trolls and the spread of fake news.

SPN will power the world's first Democratized Autonomous Platform, giving users a real voice in shaping the product roadmap and organization through an innovative proposal system.

Current Progress

Live, feature-rich beta built with Meteor.js, the recommended framework for Decentralized Applications. SPN token is live on the Rinkeby and Ropsten Ethereum Testnet.

Platform Features

1. Public/Private browsing modes for more control
2. Subscribe to branches that interest you
3. Friends, groups, posts, voting, and comments
4. Feature-rich chat with text and voice channels
5. End-to-end encrypted chat
6. Highly customizable features

...and much more

What is the Big Vision?

A decentralized network that uses the Blockchain to create a reputation-based, tokenized economy that empowers millions of users.
